## WARNING FOR PRODUCT PACKAGING

### FIRE SAFETY CLOSURE

The **SAFETY FIRE CLOSURE** product is intended exclusively for use in tunnels installed at non-freezing depths and requires adherence to specific storage conditions due to its unique shape. The product is packaged with a protective film before shipment, which protects it from weather conditions and prevents the accumulation of rainwater in the siphon. Please do not open this packaging until the time of installation.

Ideally, arrange delivery to the construction site immediately before installation or store the product during winter in a covered intermediate warehouse. If the siphon space becomes filled with water before installation, followed by repeated cycles of freezing and thawing, the product may crack. The product itself is frost-resistant, waterproof, and resistant to chemical deicing agents. However, it cannot withstand the strong pressure of frozen water in the siphon space (barrel effect with frozen water).

If these instructions are not followed and the products crack, it is not a warranty defect that can be claimed.

Thank you for your cooperation.

**TEAM CS-BETON**
